

Small, handy, thorough...

The BeachTech *sweeper*.

BeachTech[®]

The small one for big tasks -
perfect for sand cleaning.

The BeachTech *sweepy*.

Area of deployment

The BeachTech *sweepy* is the efficient and inexpensive addition to the bigger beach cleaning vehicles BeachTech 2000, 2800, 3000 as well as the self-propelled BeachTech *Marina*. Its small size and excellent manoeuvrability make it the perfect vehicle for cleaning and levelling small beaches, sandboxes, volleyball courts, sand bunkers on golf courses and other sand surfaces.

Operating principle

Thanks to the tried-and-tested vibrating screen, it is possible to carry out extremely thorough cleaning of dry sand and work fast on wet sand. For example, the screen collects cigarette butts, pieces of broken glass, small bits of wood, cans, stones, animal excrement and much more.

Depending on the amount of dirt present and the characteristics of the sand, the operating depth can be adjusted infinitely in a range between 0 and 12 cm.

With its ability to turn 360 degrees - on the spot - and its reverse gear, it guarantees an optimum cleaning process even in places that are difficult to get into. The BeachTech *sweepy* is easy to operate and

extremely manoeuvrable. Cleaning under the sunshades and between the beach loungers is no problem.

Features

The BeachTech *sweepy* is a robust vehicle. Specific parts are galvanized and some components and add-on parts are made of fibre glass reinforced plastic in order to prevent corrosion. Because it is light and small it can be transported on a pick-up truck or a trailer and can be loaded and unloaded by one person.

The BeachTech *sweepy*, with its air-cooled, four-stroke 5.5 hp engine has two forward and two reverse gears. Special sand tires, a differential lock and two separate anti-lock brakes ensure that cleaning soft sand is not a problem. The collecting container, which is easy to empty and clean, holds 22 litres. An attachable clearing blade which is 100 cm wide is also available as an optional extra. Any sand accumulation or subsidence can thus be levelled out and it also removes large dirt particles such as beach debris. A driver's seat can also be attached to ease the cleaning of larger areas.

Operating width:	900 mm
Max. surface cleaning capacity:	3,600 m ² per hour
Operating depth up to:	120 mm
Weight:	280 kg
Length of vehicle:	2,600 mm
Width of vehicle:	900 mm
Overall height:	1,100 mm
Engine:	air-cooled, four-stroke 5.5 hp gasoline engine
Driveline:	2 forward gears, 2 reverse gears
Transmission:	2 stub axles, complete with special sand tires, differential lock and separate anti-lock brakes
Max. speed:	6 km per hour
Cleaning equipment:	3 changeable blades with different mesh widths (4.5 mm/ 8 mm/ 12 mm)
Collecting container capacity:	22 litres, can be removed
Overall container volume:	60 litres
